

LUMCON WORKSHOPS

LOUISIANA UNIVERSITIES MARINE CONSORTIUM

LUMCON offers several programs that take full advantage of LUMCON facilities and resources for all audiences. During a workshop participants become part of the scientific community and experience the life and culture of a working marine lab. Our team of dedicated educators lead field and lab experiences that contribute directly to the understanding of marine and coastal environments and scientific research.

Workshops for formal and non-formal educators:

These programs help preK-12, non-formal, and university educators understand the scientific process, learn marine and coastal science, use of biotechnology in understanding the coastal environment, develop a personal connection with Louisiana's coast, translate current and relevant scientific knowledge and data, and gain confidence in teaching methods. LUMCON workshops focus on a wide range of topics and skills. Upcoming workshops dates and details will be announced through our socials and on our website.

Workshops that LUMCON has recently host are listed below.

- Coding for Marine Science
- From H-2-O: a water quality training program
- Training for Trainers - for parents that homeschool their students.
- Ship Time & Shoreline
- Beyond the Bay

Workshops for the Public:

LUMCON offers a variety of experiences through workshops for our community. These workshops are generally 2-8 hour workshops designed to allow the public to learn more about a marine science topic and interact with LUMCON faculty. Workshops that LUMCON has recently host are listed below.

LUMCON wishes to thank our many partners for their support of our teacher professional development programs.
